

Trip Portal

A window into your flight department

“Flight departments and charter operators have been telling us they need to provide a secure, convenient view of flight information to their clients. With Trip Portal, they can finally do that.”

*– David Fox
CEO and founder
Stellar Labs*

STAY IN SYNC WITH SECURE SELF-SERVICE INFORMATION

Trip Portal is the only secure window into FOS designed for users outside the flight department.

Executive assistants, corporate travel planners and aircraft owners save time by answering their own questions through read-only access to relevant FOS data. Flight departments reduce incoming requests for flight details and continue to enter information only once into FOS.

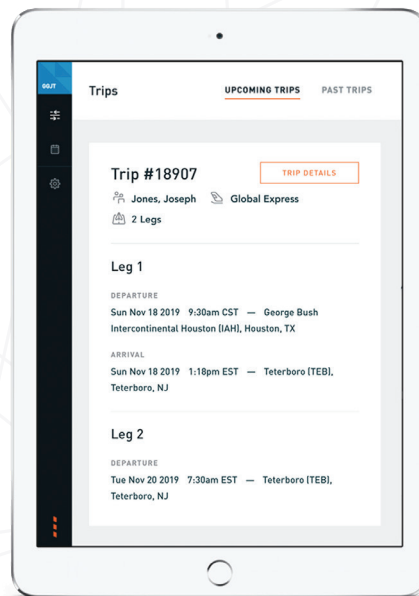

From their desktop or mobile device, users can now estimate and submit trip requests, view past and future trip information and download itineraries all through a single, intuitive dashboard. Predefined trip details instantly sync from FOS to a user friendly, read-only portal where individual user permissions protect private information.

Self-Service FOS Information

Instant access to relevant FOS information from your desktop or mobile device without phone calls and emails to the flight department

Single Dashboard

Estimate and submit trip requests, view past and future trip information and download itineraries all from a single intuitive dashboard

Stay in Sync

Standardized trip request forms, shared schedule boards and service status gives assurance requests are recorded and services are confirmed

Secure Access

Individual user permissions ensure users see what they need to and nothing they don't

FOR THE FLIGHT DEPARTMENT

About Stellar Labs

Stellar is reimagining and revolutionizing the business aviation industry with a suite of integrated, cloud-based applications.

The Stellar solution is simple enough for single-aircraft operations, yet comprehensive and robust enough to handle the most complex operations with large fleets and multiple bases.

Enter flight information just once into FOS to share up-to-date flight FOS information with users outside the flight department, reducing disruptive requests for information without the need for double data entry

Configure the trip request form to standardize trip requests coming from travel planners, ensuring requests contain the information you need

Keep flight data and personally identifiable information secure by managing access permissions for each user, ensuring travel planners view only appropriate trip and availability information

FOR THE TRAVEL PLANNER

Stay in sync with the flight department by viewing summaries of upcoming or previous trips and drilling down for details

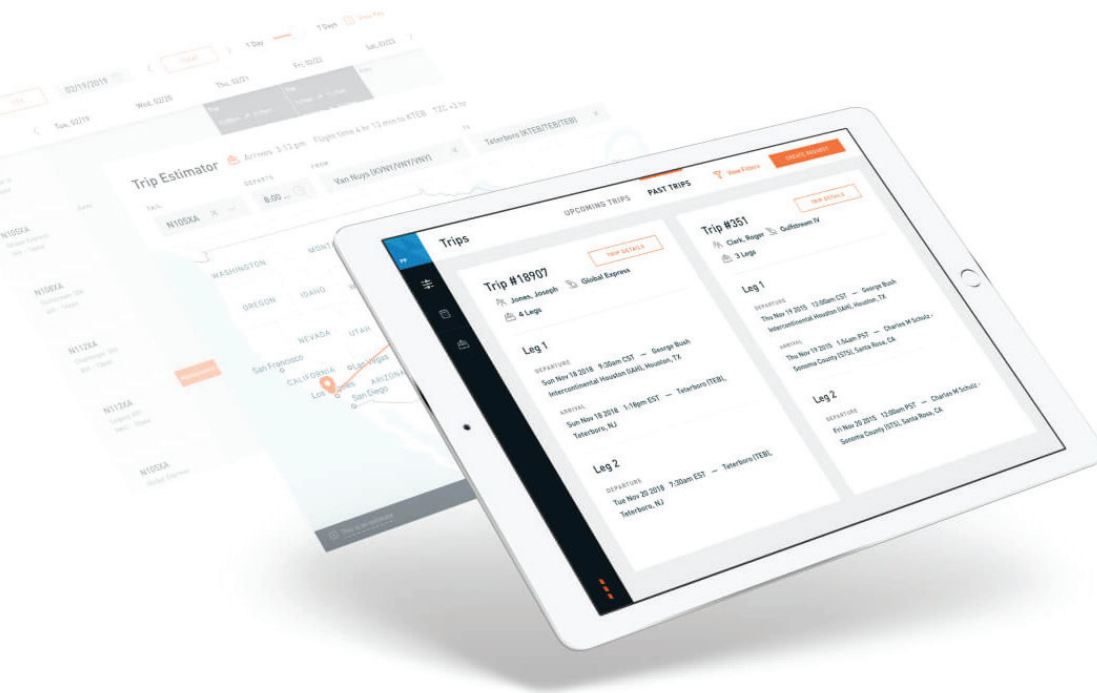

Get useful insights and make informed decisions based on accurate, up-to-date information about aircraft availability and your travelers' scheduled trips

Estimate the duration and arrival time of a flight between any two airports with greater speed and accuracy, all without phone calls and emails to the flight department

Submit trip requests that are correct, complete and more easily acted on by the flight department

Keep your travelers informed by providing them detailed, professional looking itineraries

Access and act on flight information anywhere, from your desktop or mobile device
